

Potential Sources of ASBESTOS in Your HOME

Gutters & downspouts

Acoustic ceiling tiles

Roof felts & shingles

Loose & blown-in insulation

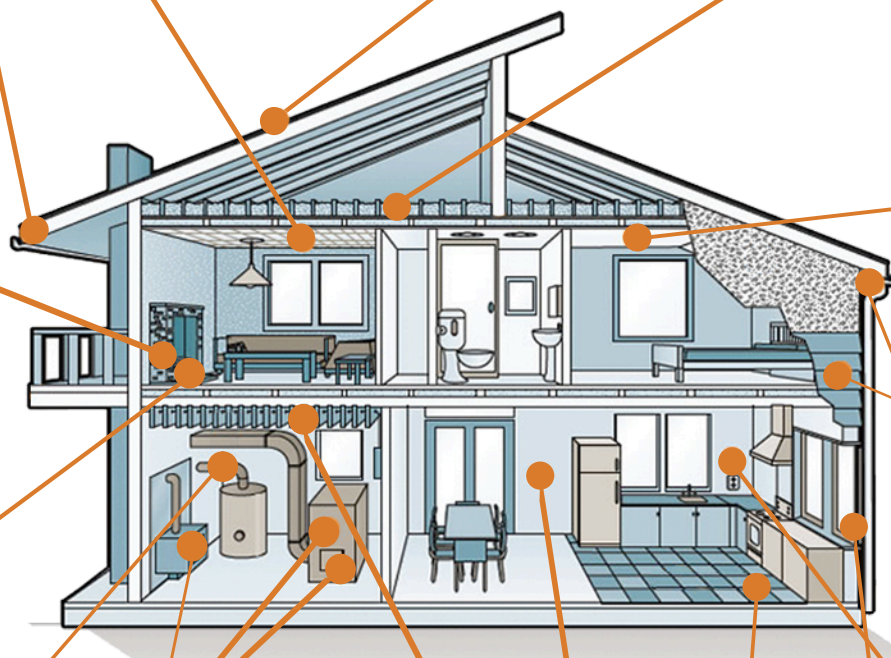

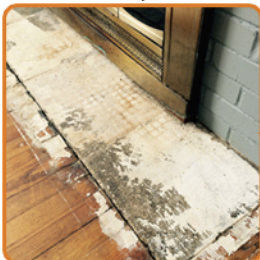

This diagram shows the location & possible appearance for 15 of the most common sources of asbestos contained in BC homes, typically constructed prior to 1980.

Artificial fireplace logs & ashes

Pad below fireplace hearth

Stipple-coated ceilings

Soffit boards & siding

Pipe insulation

Heater insulation & doors

Main panel & fuse box

Vinyl tiles & lino flooring

Outlets & wire insulation

Gypsum board filling

Window putty

This diagram is intended to be used to perform a basic visual inspection with the intent of early identification of asbestos. If you suspect the presence of asbestos at any time, immediately contact the NorHaz asbestos experts for a no obligation assessment. You and your family's safety is our #1 goal.
